

Your CONDUIT to Performance™

# 400Hz Replaceable HARDHEAD Cap

## COSTS LESS, LASTS LONGER!

What more do we need to say? You asked, PAGE listened and responded!

PAGE, the GSE Innovative Leader, took on the challenge of producing an updated longer lasting, more durable, and simply better version 400 Hz Abrasion Resistant Replaceable Cap for our customers needing this antiquated product for their existing 400Hz power cable assemblies.

PAGE's P517DT Decorative Tip, that screws on top of the JB7174X and JB7178X, on a 400Hz electrical power cable connector, replacing the JB717-C cap, is a far superior solution to their costly short lived caps.

While PAGE does not offer connectors that have a replaceable cap, we feel obligated to support our customers requests for a less costly, longer lasting decorative cap that covers the 6 pole contacts carrying 260amps of electrical current.

### Performance Features

-  Saves money on cable repair and downtime
-  Longer lasting means less time wasted replacing parts
-  Proprietary compound withstands the harshest environments
-  High visibility to reduce trip hazards when cable left on the ground.
-  Non-metallic attaching hardware to reduce the risk of electrical shorting when connector is damaged.
