P400K 400Hz Power Cable Test Kit

A comprehensive kit every Aviation Ground Support professional needs

PAGE GSE now offers the only complete 400Hz cable plug test kit in the GSE industry. The most critical component in the 400Hz ground power segment is the service cable between the GPU and aircraft. Proper periodic inspection and maintenance is essential to efficient operations. This kit will allow the technician to verify the retention force on each power and control pin on aircraft plug, verify surface temperatures on the plug head, as well as provide accurate no load testing of the cable to ensure the proper voltages and phases are correct. E&F safety interlock is functioning leaving nothing to chance when connecting external ground power to an aircraft.

Test Kit Features

- P2861 Phase Sequence Tester** Voltage and phase checker with test point to read no load voltage with meter.
- P471 Go/No Go Gauge** Aircraft receptacle pin tester with non-metallic handle.
- P472 Pin Gauge Tester** 400Hz plug retention tester with lanyard.
- P473 Tensionometer** Digital inch pound scale with peak reading for power and control plug removal force.
- P474 IR Thermometer** Infrared Digital Thermometer in Fahrenheit.
- 400Hz Power Pin Bore Brush** Nylon socket cleaning bore brush.
- 400Hz Control Pin Bore Brush** Nylon socket cleaning bore brush.
- Ruggedized Hard Case** 16"L x 13"W x 8"H. Include cutout foam to hold above listed components.
